

Data Sheet

SAX021SE51mm BMW F8x M2 M3 M4 brake cooling ducts with stone guards – 51mm for Speed Engineering or 3d printed ducts

Features

High strength, low weight, premium aluminium brake cooling ducts with full stone guard coverage.

Applications

The SAX021SE51mm brake cooling duct is designed specifically to fit the BMW F8x platform, specifically the M2, M3 and M4 variants. It is NOT designed to fit the F2x/F3x platform.

General Description

Fabricated from a mixture of 5251 and 6082 aluminium, the ducts are both strong and lightweight, and are designed to replace the flimsy OEM parts as a straight swap. The inlets feature openings are 51mm and are the perfect match to be fed by the flow of air from the Speed Engineering or 3d printed scoops sold separately.

Fitting should be executed by a competent mechanic, and can be achieved in less than an hour. M6 fasteners are included with the kit, and a torque of 16Nm is observed.

It is recommended that the brake ducts are fitted by a competent mechanic, as the braking system is the single most important safety feature of a modern vehicle.
