

Data Sheet

SAX021evo BMW F8x M2 M3 M4 brake cooling ducts with stone guards

Features

High strength, low weight, premium aluminium brake cooling ducts with full stone guard coverage.

Applications

The SAX021evo brake cooling ducts is designed specifically to fit the BMW F8x platform, specifically the M2, M3 and M4 variants. It is NOT designed to fit the F2x/F3x platform.

General Description

Fabricated from a mixture of 5251 and 6082 aluminium, the ducts are both strong and lightweight, and are designed to replace the flimsy OEM parts as a straight swap. The inlets feature openings that are fed by the flow of air from the standard ducting from the front of the car, no other parts are needed. This makes them ideal as replacement/initial upgrade for fast road and track use as the stone guard feature is retained, and the guards can be used in all weathers without fear of damaging the discs.

Fitting should be executed by a competent mechanic, and can be achieved in less than an hour. M6 fasteners are included with the kit, and a torque of 16Nm observed.

The kit can be upgraded with the SAX022 remote scoop kit, which directs air from a scoop mounted to a lower control arm through a flexible silicon pipe to the SAX021evo duct.

It is recommended that the brake ducts are fitted by a competent mechanic, as the braking system is the single most important safety feature of a modern vehicle.
