

Data Sheet

SAX022 BMW F8x M2 M3 M4 brake cooling scoop kit

Features

High strength, low weight, premium aluminium brake cooling scoop upgrade kit for SAX021evo.

Applications

The SAX022 brake cooling scoop kit is designed specifically to fit the SAX021evo brake ducts for BMW F8x platform, specifically the M2, M3 and M4 variants. It is NOT designed to fit the F2x/F3x platform.

General Description

Fabricated from a mixture of 5251 and 6082 aluminium, the scoops are both strong and lightweight, and are designed to be attached to the lower control arms. The hose is then used to feed the air supply to the SAX021evo ducts, and is secured in place with the supplied mounting hardware.

Fitting should be executed by a competent mechanic, and can be achieved in less than an hour. Full travel of the suspension and steering lock should be observed to ensure clearance of the various new parts, so fitting while the vehicle is elevated on a workshop ramp is important. The kit is recommended only for use on the track.

It is recommended that the brake ducts are fitted by a competent mechanic, as the braking system is the single most important safety feature of a modern vehicle.
